D. The statement value and fair value of bonds June 30, 2011 were as follows:

	Statement value	Gross unrealized gains	Gross unrealized losses	Fair value
	(In thousands)			
U.S. governments	\$ 8,237	231	0	8,468
Special revenue & assessment obligations and all non-guaranteed obligations of agencies and authorities of U.S. governments	407	71	0	478
Industrial & miscellaneous	1,019	23	0	1,042
Mortgage-backed securities	139	2	0	141
Total bonds	\$ 9,802	327	0	10,129

Bonds in an unrealized loss position are regularly reviewed for other-than-temporary declines in value. Factors considered in determining whether a decline is other-than-temporary include the length of time a bond has been in an unrealized loss position and the reasons for the decline in value. Assessments include judgments about an obligor's or guarantor's current and projected financial position, an issuer's current and projected ability to service and repay its debt obligations, the existence of, and realizable value for, any collateral backing the obligations, and the macro-economic and micro-economic outlooks for specific industries and issuers. Estimating the future cash flows of loan-backed securities also involves assumptions regarding the underlying collateral such as prepayment rates, default and recovery rates, existence of subordinated classes capable of absorbing losses, and third-party servicing abilities.

In performing its other-than-temporary impairment reviews, American Manufacturers Mutual Insurance Company (the "Company"), in consultation with its engaged portfolio manager, considers the relevant facts and circumstances relating to each investment and exercises judgment in determining whether a bond is other-than-temporarily impaired. Among the factors considered are whether the decline in fair value results from fundamental credit problems of the issuer, or is interest related, and the likelihood of recovering the amortized cost based on the current and short-term prospects of the issuer. Unrealized losses are determined to be temporary where such losses are primarily the result of market conditions, such as increasing interest rates, unusual market volatility, or industry-related events, and where the Company also believes it is probable that the Company will be able to collect all amounts when due in accordance with the contractual terms of the investment and, furthermore, has the intent and ability to hold the investment until the market recovers or maturity and, therefore, does not have the intent to sell the investment.

The risks inherent in reviewing the impairment of any investment include the risk that market results may differ from expectations; facts and circumstances may change in the future and differ from estimates and assumptions; or the Company may later decide to sell the security and realize a loss as a result of changes in the specific facts and circumstances surrounding a bond, or the outlook for its industry sector or the economy.

**20. FAIR VALUE MEASUREMENTS**

Fair values are estimated at specific points in time, based on relevant market information and information about the financial instrument. These estimates do not reflect any premium or discount that could result from offering for sale at one time the Company's entire holdings of a particular financial instrument. Fair values are based on quoted market prices when available and appropriate. Otherwise fair values for financial instruments are generally determined using discounted cash flow models and assumptions that are based on judgments regarding current and future economic conditions and the risk characteristics of the investments. Although fair values are calculated using assumptions that management believes are appropriate, changes in assumptions could significantly affect the estimates and such estimates should be used with care.

Fair values are determined for existing on- and off-balance sheet financial instruments without attempting to estimate the value of anticipated future business and the value of assets and certain liabilities that are not considered financial instruments. Accordingly, the aggregate fair value presented does not represent the underlying value of the Company.

The following methods and assumptions were used by the Company in estimating the fair value of its financial instruments:

*Bonds:* Fair values for bonds are determined using quoted market prices from an orderly market at the reporting date for those or similar investments. If quoted market prices from an orderly market are not available, the fair value is determined using an income approach valuation technique (present value using the discount rate adjustment technique) that considers, among other things, interest rates, the

issuer's credit spread, prepayments, performance of the underlying collateral for loan-backed securities and illiquidity by sector and maturity.

*Cash equivalents and short-term investments:* Fair values for money market funds are based on quoted market prices. Fair values for other instruments approximate amortized cost.

*Cash:* The statement value reported for cash approximates fair value.

The statement values and fair values of the Company's financial instruments at June 30, 2011 and December 31, 2010 were as follows:

	2011		2010	
	Statement value	Fair value	Statement value	Fair value
	(In thousands)			
Financial instruments recorded as assets:				
Bonds	\$ 9,802	10,129	9,456	9,742
Cash, cash equivalents, and short-term investments	283	283	739	739

The Company does not have any financial assets carried at fair value at June 30, 2011. If it did have financial assets carried at fair value, they would be classified, for disclosure purposes, based on a fair value hierarchy defined by SSAP No. 100, *Fair Value Measurements*. The hierarchy gives the highest ranking to fair values determined using unadjusted quoted prices in active markets for identical assets (Level 1) and the lowest ranking to fair values determined using methodologies and models with unobservable inputs (Level 3). An asset's classification is determined based on the lowest level input that is significant to its fair value measurement. For example, a Level 3 fair value measurement may include inputs that are both observable (Levels 1 and 2) and unobservable (Level 3). The levels of the fair value hierarchy are as follows:

*Level 1* – Inputs are unadjusted quoted prices for identical assets in active markets accessible at the measurement date.

*Level 2* – Inputs include quoted prices for similar assets in active markets, quoted prices from those willing to trade in markets that are not active, or other inputs that are observable or can be corroborated by market data for the term of the instrument. Examples of other inputs include market interest rates, volatilities, spreads, yield curves, prepayment speeds and default rates.

*Level 3* – Includes unobservable inputs that are supported by little or no market activity and are significant to the fair value measurement. Unobservable inputs reflect the Company's best estimate of what assumptions hypothetical market participants would use to determine a transaction price for the asset at the reporting date.
